DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to a method for measuring a parameter from voltage, temperature, and integrated circuit processing conditions classified in class 324, subclass 617.
- II. Claims 25-44, drawn to an analog to digital converter, classified in class 341, subclass 161.
- III. Claims 45-51, drawn to converting an analog voltage to a digital signal, classified in class 324, subclass 607.

Inventions I, II, and III are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility from inventions II and III such as measuring a parameter selected from the group consisting of voltage, temperature, or integrated circuit process conditions as the method consists of measuring a first extent of delay signal propagation along said primary delay line. Invention II has separate utility from inventions I and III in that it provides digital to analog conversion without having to take any measurements. Invention III has separate utility from inventions I and II in that it converts an analog voltage to a digital signal by adjusting a sampling period and measuring an extent of delay signal propagation. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for each of the groups is not required for the other specific groups, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr. Carl Forest on March 1, 2005 a provisional election was made without traverse for restricting group I from the others, but with traverse on the restriction of group II from group III, to prosecute the invention of group II, claims 25-44. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-24 and 45-51 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Because the elected group is outside of the class that the examiner searches a formal reply to the restriction must be made, for transfer purposes. Upon receiving the formal reply, the case will be transferred to the appropriate class for examination purposes.
